PARTS CATALOG (OCB450)

CITY MULTI

• Indoor unit

• Wired remote controller

Display Section

For purposes of this explanation, all parts of the display are shown as lit. During actual operation, only the relevant items will be lit.

Identifies the current operation
Shows the operating mode, etc.
*Multilanguage display is available.

“Centrally Controlled” indicator
Indicates that operation from the remote controller has been prohibited by a master controller.

“Timer is Off” indicator
Indicates that the timer is off.

Temperature Setting
Shows the target temperature.

Day-of-Week
Shows the current day of the week.

Time/Timer Display
Shows the current time, unless the simple or Auto Off timer is set.
If the simple or Auto Off timer is set, the time to be switched off is shown.

“Sensor” indication
Displayed when the remote controller sensor is used.

“Locked” indicator
Indicates that remote controller buttons have been locked.

“Clean The Filter” indicator
To be displayed on when it is time to clean the filter.

Timer indicators
The indicator comes on if the corresponding timer is set.

Fan Speed indicator
Shows the selected fan speed.

Ventilation indicator
Appears when the unit is running in Ventilation mode.

Up/Down Air Direction indicator
The indicator shows the direction of the outcoming airflow.

Room Temperature display
Shows the room temperature. The room temperature display range is 46–102°F. The display blinks if the temperature is less than 46°F or 102°F or more.

“One Hour Only” indicator
Displayed if the airflow is set to Low or downward during COOL or DRY mode. (Operation varies according to model.)
The indicator goes off in one hour, at which time the airflow direction also changes.

Louver display
Indicates the action of the swing louver. Does not appear if the louver is not running.

(Power On indicator)
Indicates that the power is on.

Operation Section

Temperature setting buttons

Timer Menu button (Monitor/Set button)

Mode button (Return button)

Set Time buttons

Timer On/Off button (Set Day button)

ON/OFF button

Fan Speed button

Filter button (<Enter> button)

Test Run button

Check button (Clear button)

Airflow Up/Down button

Louver button (▽ Operation button)

▽ To return operation number

Ventilation button (△ Operation button)

△ To go to next operation number

Built-in temperature sensor

Note:

- “PLEASE WAIT” message
This message is displayed for approximately 3 minutes when power is supplied to the indoor unit or when the unit is recovering from a power failure.
- “NOT AVAILABLE” message
This message is displayed if an invalid button is pressed (to operate a function that the indoor unit does not have).
If a single remote controller is used to operate multiple indoor units simultaneously that are different types, this message will not be displayed as far as any of the indoor units is equipped with the function.

2-1. SPECIFICATIONS

Model		PCFY-P15NKMU-E	PCFY-P24NKMU-E	PCFY-P30NKMU-E	PCFY-P36NKMU-E

Drain float switch	FS	Open / Short detection DC 5V		
Linear expansion valve	LEV	DC12V Stepping motor drive Port dimension ø3.2 (0~2000pulse) EFM-40YGME	DC12V Stepping motor drive Port dimension ø5.2 (0~2000pulse) EFM-80YGME	
Power supply terminal block	TB2	(L1, L2, GR) Rated to 330V 30A*		
Transmission terminal block	TB5	(M1, M2, S) Rated to 250V 20A *		
MA remote controller terminal block	TB15	(1, 2) Rated to 250V 10A *		

*Note : Refer to WIRING DIAGRAM for the supplied voltage.

2-3. SOUND LEVEL

PCFY-P•NKMU-E

* Measured in anechoic room.

Sound level at anechoic room : Low-Mid2-Mid1-High

Service Ref.	Sound level dB (A)
PCFY-P15NKMU-E	29-32-34-36
PCFY-P24NKMU-E	31-33-35-37
PCFY-P30NKMU-E	34-37-40-43
PCFY-P36NKMU-E	36-39-42-44

2-4. NC CURVES

PCFY-P15NKMU-E

External static pressure : 0Pa
Power source : 208V, 230V, 60Hz

PCFY-P24NKMU-E

External static pressure : 0Pa
Power source : 208V, 230V, 60Hz

PCFY-P30NKMU-E

External static pressure : 0Pa
Power source : 208V, 230V, 60Hz

PCFY-P36NKMU-E

External static pressure : 0Pa
Power source : 208V, 230V, 60Hz

2-5. FRESH AIR INTAKE AMOUNT & STATIC PRESSURE CHARACTERISTICS

■ PCFY-P15NKMU-E

How to read curves

- Q...Designed amount of fresh air intake <CMM(CFM)>
- A...Static pressure loss of fresh air intake duct system with airflow amount Q <Pa(in.W.G.x10⁻²)>
- B...Forced static pressure at air conditioner inlet with airflow amount Q <Pa(in.W.G.x10⁻²)>
- C...Static pressure of booster fan with airflow amount Q <Pa(in.W.G.x10⁻²)>
- D...Static pressure loss increase amount of fresh air intake duct system for airflow amount Q <Pa(in.W.G.x10⁻²)>
- E...Static pressure of indoor unit with airflow amount Q <Pa(in.W.G.x10⁻²)>
- Qa...Estimated amount of fresh air intake without D <CMM(CFM)>

■ PCFY-P24NKMU-E

■ PCFY-P30, 36NKMU-E

PCFY-P30, 36NKMU-E

Unit : inch(mm)

- NOTES.**
1. Use M10 or W3/8 screw for anchor bolt.
 2. Please be sure when installing the drain lift up mechanism (option parts), refrigerant pipe will be only upward.

- 1 Drainage pipe connection (1(26mm)) I.D.)
 - 2 Drainage pipe connection (for the left arrangement)
 - 3 Knock out hole for left drain-piping arrangement
 - 4 Refrigerant-pipe connection (gas pipe side/flared connection)
 - 5 Refrigerant-pipe connection (liquid pipe side/flared connection)
 - 6 Knock out hole for upper drain pipe arrangement
 - 7 Knock out hole for fresh air intake $\Phi 3-15/16$ ($\Phi 100$)
 - 8 Knock out hole for wiring arrangement $\Phi 7/8$ ($\Phi 22$)
- Accessory... Drain socket (1(26mm)) I.D.)

LED on indoor board for service

Mark	Meaning	Function
LED1	Main power supply	Main Power supply (Indoor unit:208-230V) power on → lamp is lit
LED2	Power supply for MA-Remote controller	Power supply for MA-Remote controller on → lamp is lit

NOTES:

1. At servicing for outdoor unit, always follow the wiring diagram of outdoor unit.
2. In case of using MA-Remote controller, please connect to TB15. (Remote controller wire is non-polar.)
3. In case of using M-NET, please connect to TB5. (Transmission line is non-polar.)
4. Symbol [S] of TB5 is the shield wire connection.
5. Symbols used in wiring diagram above are, : terminal block, : connector.
6. The setting of the SW2 dip switches differs in the capacity. For the detail, refer to fig.*1.

<*2>Use copper supply wires.

MICROPROCESSOR CONTROL

INDOOR UNIT CONTROL

6-1. COOL OPERATION

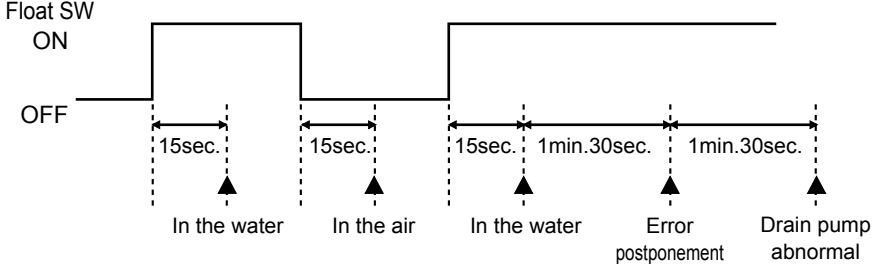

<How to operate>

- ① Press POWER ON/OFF button.
- ② Press the operation MODE button to display COOL.
- ③ Press the TEMP. button to set the desired temperature.

NOTE: The set temperature changes 2°F when the ∇ or Δ button is pressed one time. Cooling 67 to 87°F

Control modes	Control details	Remarks				
1. Thermoregulating function	<p>1-1. Thermoregulating function (Function to prevent restarting for 3 minutes)</p> <ul style="list-style-type: none"> • Room temperature \geq desired temperature + 2°F ...Thermo ON • Room temperature \leq desired temperature ...Thermo OFF 					
	<p>1-2. Anti-freezing control</p> <p>Detected condition : When the liquid pipe temp. (TH22) is 32°F or less in 16 minutes from compressors start up, anti-freezing control starts and the thermo OFF.</p> <p>Released condition : The timer which prevents reactivating is set for 3 minutes, and anti-freezing control is cancelled when any one of the following conditions is satisfied.</p> <ol style="list-style-type: none"> ① Liquid pipe temp. (TH22) turns 50°F or above. ② The condition of the thermo OFF has become complete by thermoregulating, etc. ③ The operation modes became mode other than COOL. ④ The operation stopped. 					
2. Fan	<p>By the remote controller setting (switch of 4 speeds+Auto)</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Type</th> <th>Fan speed notch</th> </tr> </thead> <tbody> <tr> <td>4 speeds + Auto type</td> <td>[Low], [Med2], [Med1], [High], [Auto]</td> </tr> </tbody> </table> <p>When [Auto] is set, fan speed is changed depending on the value of: Room temperature - Desired temperature</p>	Type	Fan speed notch	4 speeds + Auto type	[Low], [Med2], [Med1], [High], [Auto]	
Type	Fan speed notch					
4 speeds + Auto type	[Low], [Med2], [Med1], [High], [Auto]					

Control modes	Control details	Remarks
3. Drain pump	<p>3-1. Drain pump control</p> <ul style="list-style-type: none"> • Drain pump is always ON during the COOL and DRY mode operation. (Regardless of the thermo ON/OFF) • When the operation mode has changed from the COOL or DRY to the others (including Stop), the drain pump will be kept on for 3 minutes, then turns OFF. <p>Float switch control</p> <ul style="list-style-type: none"> • Float switch control judges whether the sensor is in the air or in the water by turning the float switch ON/OFF. In the water: Detected that the float switch is ON for 15 seconds. In the air : Detected that the float switch is OFF for 15 seconds. 	
4. Vane (up/down vane change)	<p>(1) Initial setting: Start at COOL mode and horizontal vane.</p> <p>(2) Vane position: Horizontal → Downward A → Downward B → Downward C → Downward D → Swing → Auto</p> <p>(3) Restriction of the downward vane setting When setting the downward vane A, B, C or D in [Med1], [Med2], [Low] or [Auto] of the fan speed notch, the vane changes to horizontal position after 1 hour have passed.</p>	<p>· "ONLY 1 Hr" appears on the wired remote controller.</p>

6-2. DRY OPERATION

<How to operate>

- ① Press POWER ON/OFF button.
- ② Press the operation MODE button to display DRY.
- ③ Press the TEMP. button to set the desired temperature.

NOTE: The set temperature changes 2°F when the ∇ or \triangle button is pressed one time. Dry 67 to 87°F

Control modes	Control details	Remarks																															
1. Thermo regulating function	<p>1-1. Thermo regulating function (Function to prevent restarting for 3 minutes) Setting the Dry thermo by the thermo regulating signal and the room temperature (TH21). 3. Drain pump	Same control as COOL operation																																
4. Vane (up/down vane change)	Same control as COOL operation																																

6-3. FAN OPERATION

<How to operate>

- ① Press POWER ON/OFF button.
- ② Press the operation MODE button to display FAN.

Control modes	Control details	Remarks				
1. Fan	<p>Set by remote controller.</p> <table border="1"> <thead> <tr> <th>Type</th> <th>Fan speed notch</th> </tr> </thead> <tbody> <tr> <td>4 speeds + Auto type</td> <td>[Low], [Med2], [Med1], [High], [Auto]</td> </tr> </tbody> </table> <p>When [Auto] is set, fan speed becomes [Low].</p>	Type	Fan speed notch	4 speeds + Auto type	[Low], [Med2], [Med1], [High], [Auto]	
Type	Fan speed notch					
4 speeds + Auto type	[Low], [Med2], [Med1], [High], [Auto]					
2. Drain pump	<p>2-1. Drain pump control The drain pump turns ON for the specified amount of time when any of the following conditions is met:</p> <ol style="list-style-type: none"> ① ON for 3 minutes after the operation mode is switched from COOL or DRY to another operation mode (FAN). ② ON for 6 minutes after the float switch is submerged in the water when the float switch control judges the sensor is in the water. 					
	<p>2-2. Float switch control</p> <ul style="list-style-type: none"> • Float switch control judges whether the sensor is in the air or in the water by turning the float switch ON/OFF. <p>In the water : Detected that the float switch is ON for 15 seconds. In the air : Detected that the float switch is OFF for 15 seconds.</p>	· Same control as COOL operation				
3. Vane (up/down vane change)	Same as the control performed during the COOL operation, but with no restriction on the vane's downward blow setting					

6-4. HEAT OPERATION

<How to operate>

- ① Press POWER ON/OFF button.
- ② Press the operation MODE button to display HEAT.
- ③ Press the TEMP. button to set the desired temperature.

NOTE: The set temperature changes 2°F when the ∇ or \triangle button is pressed one time. Heating 63 to 83°F.

<Display in HEAT operation>

[DEFROST]

The [DEFROST] symbol is only displayed during the defrost operation.

[STANDBY]

The [STANDBY] symbol is only displayed during the hot adjust mode.

Control modes	Control details	Remarks				
1. Thermoregulating function	1-1. Thermoregulating function (Function to prevent restarting for 3 minutes) <ul style="list-style-type: none"> • Room temperature \leq desired temperature -2°F ...Thermo ON • Room temperature \leq desired temperature ...Thermo OFF 					
2. Fan	<p>By the remote controller setting (switch of 4 speeds+Auto)</p> <table border="1" style="margin-left: 40px;"> <thead> <tr> <th>Type</th> <th>Fan speed notch</th> </tr> </thead> <tbody> <tr> <td>4 speeds + Auto type</td> <td>[Low], [Med2], [Med1], [High], [Auto]</td> </tr> </tbody> </table> <p>When [Auto] is set, fan speed is changed depending on the value of: Desired temperature - Room temperature Give priority to under-mentioned controlled mode</p> <p>2-1. Hot adjust mode 2-2. Residual heat exclusion mode 2-3. Thermo OFF mode (When the compressor off by the thermoregulating) 2-4. Cool air prevention mode (Defrosting mode)</p>	Type	Fan speed notch	4 speeds + Auto type	[Low], [Med2], [Med1], [High], [Auto]	
Type	Fan speed notch					
4 speeds + Auto type	[Low], [Med2], [Med1], [High], [Auto]					
	<p>2-1. Hot adjust mode</p> <p>The fan controller becomes the hot adjuster mode for the following conditions.</p> <ol style="list-style-type: none"> ① When starting the HEAT operation ② When the thermoregulating function changes from OFF to ON. ③ When release the HEAT defrosting operation <div style="text-align: center;"> </div> <p>A: Hot adjust mode starts. B: 5 minutes have passed since the condition A or the indoor liquid pipe temperature turned 95°F or more. C: 2 minutes have passed since the condition B. (Terminating the hot adjust mode)</p>	*1 "STAND BY" will be displayed during the hot adjust mode.				
	<p>2-2. Residual heat exclusion mode</p> <p>When the condition changes the auxiliary heater ON to OFF (thermoregulating or operation stop, etc), the indoor fan operates in [Low] mode for 1 minute.</p>	· This control is same for the model without auxiliary heater.				

To be continued on the next page.

From the preceding page

Control modes	Control details	Remarks
2. Fan	2-3. Thermo OFF mode When the thermoregulating function changes to OFF, the indoor fan operates in [Extra low].	
	2-4. Heat defrosting mode The indoor fan stops.	
3. Drain pump	3-1. Drain pump control The drain pump turns ON for the specified amount of time when any of the following conditions is met: ① ON for 3 minutes after the operation mode is switched from COOL or DRY to another operation mode (FAN). ② ON for 6 minutes after the float switch is submerged in the water when the float switch control judges the sensor is in the water.	
	3-2. Float switch control • Float switch control judges whether the sensor is in the air or in the water by turning the float switch ON/OFF. In the water: Detected that the float switch is ON for 15 seconds. In the air : Detected that the float switch is OFF for 15 seconds.	· Same control as COOL operation
4. Vane control (Up/down vane change)	(1) Initial setting: OFF → HEAT…[last setting] When the last setting is [Swing] … [Downward D] When changing the mode from exception of HEAT to HEAT operation …[Downward D] (2) Vane position: Horizontal →Downward A →Downward B →Downward C→Downward D→Swing→Auto  (3) Restriction of vane position ① The vane is horizontally fixed for the following modes. (The control by the remote controller is temporarily invalidated and control by the unit.) •Thermo OFF •Hot adjust [Extra low] mode •Heat defrost mode	

6-5. AUTO OPERATION [AUTOMATIC COOL/HEAT CHANGE OVER OPERATION]

<How to operate>

- ① Press POWER ON/OFF button.
 - ② Press the operation MODE button to display AUTO.
 - ③ Press the TEMP. button to set the desired temperature.
- NOTE:** The set temperature changes 2°F when the ∇ or Δ button is pressed one time. Automatic 67 to 83°F

Control modes	Control details	Remarks
1. Initial value of operation mode	HEAT mode for room temperature < Desired temperature COOL mode for room temperature \geq Desired temperature	
2. Mode change	(1) HEAT mode \rightarrow COOL mode Room temperature \geq Desired temperature + 3°F. or 3 min. has passed (2) COOL mode \rightarrow HEAT mode Room temperature \geq Desired temperature - 3°F. or 3 min. has passed	
3. COOL mode	Same control as cool operation	
4. HEAT mode	Same control as heat operation	

6-6. WHEN UNIT IS STOPPED

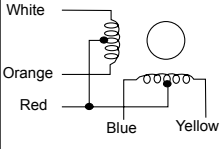

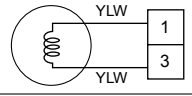

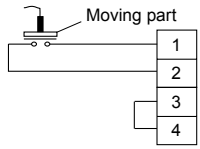

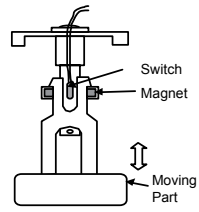

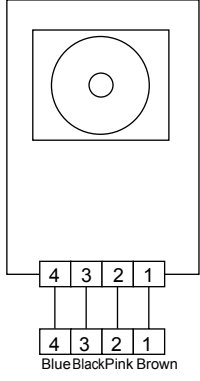

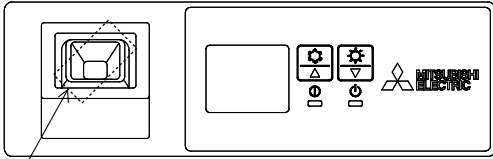

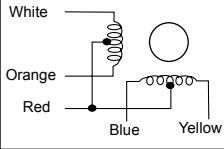

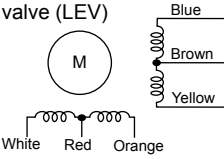

Control modes	Control details	Remarks
1. Drain pump	1-1. Drain pump control The drain pump turns ON for the specified amount of time when any of the following conditions is met: ① ON for 3 minutes after the operation mode is switched from COOL or DRY to another operation mode (FAN). ② ON for 6 minutes after the float switch is submerged in the water when the float switch control judges the sensor is in the water.	
	1-2. Float switch control • Float switch control judges whether the sensor is in the air or in the water by turning the float switch ON/OFF. In the water : Detected that the float switch is ON for 15 seconds. In the air : Detected that the float switch is OFF for 15 seconds.	• Same control as COOL operation

①(+)—③(-)	DC 0.939V~ 1.506V	Other than the normal													
Vane motor for i-see sensor (Option) 	Measure the resistance between the terminals using a tester. (At the ambient temperature of 68°F~86°F) <table border="1" style="margin-left: 20px;"> <tr> <th>Connector</th> <th>Normal</th> <th>Abnormal</th> </tr> <tr> <td>Red - Yellow</td> <td rowspan="4">250Ω</td> <td rowspan="4">Open or short</td> </tr> <tr> <td>Red - Blue</td> </tr> <tr> <td>Red - Orange</td> </tr> <tr> <td>Red - White</td> </tr> </table>	Connector	Normal	Abnormal	Red - Yellow	250Ω	Open or short	Red - Blue	Red - Orange	Red - White					
Connector	Normal	Abnormal													
Red - Yellow	250Ω	Open or short													
Red - Blue															
Red - Orange															
Red - White															
Linear expansion valve (LEV) 	Disconnect the connector then measure the resistance valve using a tester. <table border="1" style="margin-left: 20px;"> <tr> <th colspan="4">Normal</th> <th>Abnormal</th> </tr> <tr> <td>White-Red</td> <td>Yellow-Brown</td> <td>Orange-Red</td> <td>Blue-Brown</td> <td rowspan="2">Open or short</td> </tr> <tr> <td colspan="4" style="text-align: center;">200Ω ±10%</td> </tr> </table> Refer to 7-1-2.	Normal				Abnormal	White-Red	Yellow-Brown	Orange-Red	Blue-Brown	Open or short	200Ω ±10%			
Normal				Abnormal											
White-Red	Yellow-Brown	Orange-Red	Blue-Brown	Open or short											
200Ω ±10%															

7-1-1. Thermistor

<Thermistor characteristic graph>

Thermistor for lower temperature

Room temperature thermistor (TH21)
Liquid pipe temperature thermistor (TH22)
Gas pipe temperature thermistor (TH23)

Thermistor $R_0=15k\Omega \pm 3\%$
Fixed number of $B=3480 \pm 2\%$

$$R_t = 15 \exp \left\{ 3480 \left(\frac{1}{273 + (t-32)/1.8} - \frac{1}{273} \right) \right\}$$

30°F	15.8kΩ
50°F	9.6kΩ
70°F	6.0kΩ
80°F	4.8kΩ
90°F	3.9kΩ
100°F	3.2kΩ

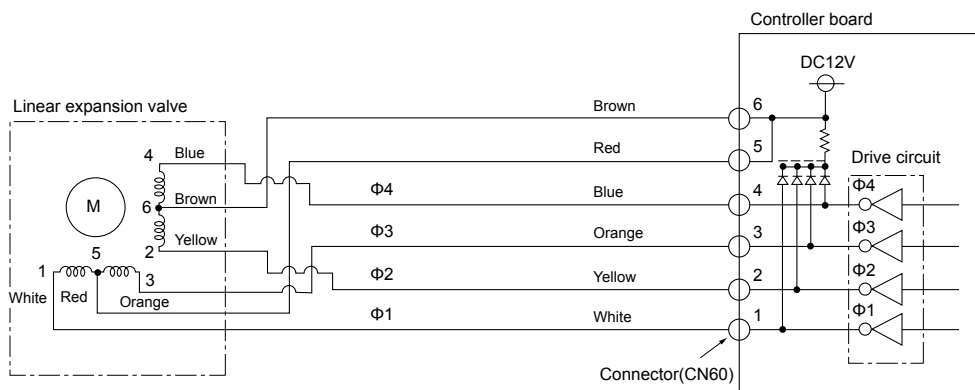

7-1-2. Linear expansion valve

① Operation summary of the linear expansion valve

- Linear expansion valve open/close through stepping motor after receiving the pulse signal from the indoor controller board.
- Valve position can be changed in proportion to the number of pulse signals.

<Connection between the indoor controller board and the linear expansion valve>

<Output pulse signal and the valve operation>

Output (Phase)	Output			
	1	2	3	4
Φ1	ON	OFF	OFF	ON
Φ2	ON	ON	OFF	OFF
Φ3	OFF	ON	ON	OFF
Φ4	OFF	OFF	ON	ON

Closing a valve : 1 → 2 → 3 → 4 → 1
 Opening a valve : 4 → 3 → 2 → 1 → 4
 The output pulse shifts in above order.

Note:

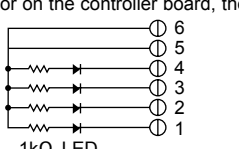

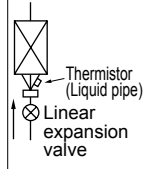

- When linear expansion valve operation stops, all output phase become OFF.
- At phase interruption or when phase does not shift in order, motor does not rotate smoothly and motor will lock and vibrate.

② Linear expansion valve operation

- When the switch is turned on, 2200 pulse closing valve signal will be sent till it goes to point ㉞ in order to define the valve position.
- When the valve moves smoothly, there is no sound or vibration occurring from the linear expansion valves, however, when the pulse number moves from ㉞ to ㉞ or when the valve is locked, more sound can be heard than in a normal situation.
- Sound can be detected by placing the ear against the screw driver handle while putting the screw driver tip to the linear expansion valve.

③ Trouble shooting

Symptom	Check points	Countermeasures
Operation circuit failure of the micro processor	Disconnect the connector on the controller board, then connect LED for checking.  1kΩ LED When power is turned on, pulse signals will be output for 10 seconds. There must be some defects in the operation circuit if the LED does not light while the signals are output or keeps lighting even after the signals stop.	Exchange the indoor controller board at drive circuit failure.
Linear expansion valve mechanism is locked.	Motor will idle and make a ticking noise when the motor is operated while the linear expansion valve is locked. This ticking sound is the sign of the abnormality.	Exchange the linear expansion valve.
Short or breakage of the motor coil of the linear expansion valve	Measure the resistance between each coil (white-red, yellow-brown, orange-red, blue-brown) using a tester. It is normal if the resistance is in the range of 200Ω ±10%.	Exchange the linear expansion valve.
Valve does not close completely.	To check the linear expansion valve, operate the indoor unit in fan mode and at the same time operate other indoor units in cooling mode, then check the pipe temperature <liquid pipe temperature> of the indoor unit by the outdoor multi controller board operation monitor. During fan operation, linear expansion valve is closed completely and if there is any leaking, detecting temperature of the thermistor will go lower. If the detected temperature is much lower than the temperature indicated in the remote controller, it means the valve is not closed all the way.  Thermistor (Liquid pipe) Linear expansion valve It is not necessary to exchange the linear expansion valve, if the leakage is small and not affecting normal operation.	If large amount of refrigerant is leaked, exchange the linear expansion valve.
Wrong connection of the connector or contact failure	Check the color of lead wire and missing terminal of the connector.	Disconnect the connector at the controller board, then check the continuity.

7-1-3. DC Fan motor (fan motor/indoor controller circuit board)

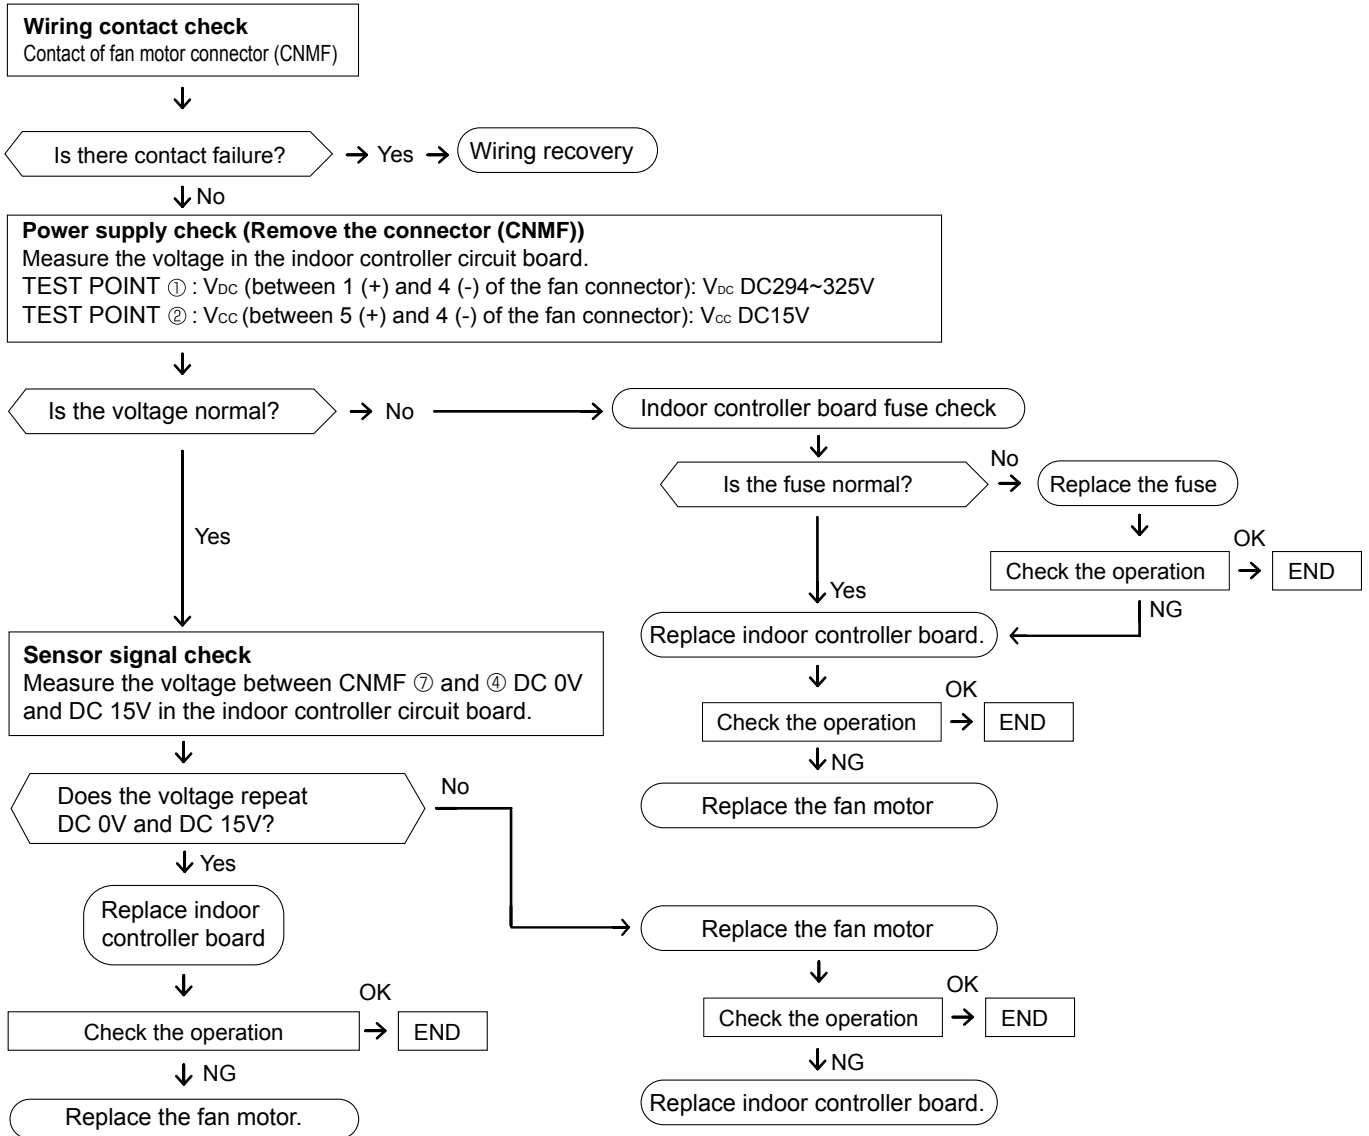

Check method of DC fan motor (fan motor/indoor controller circuit board)

① Notes

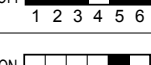

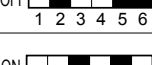

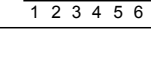

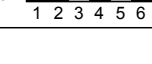

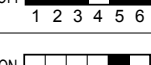

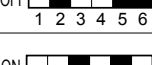

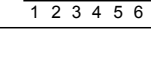

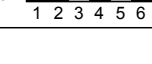

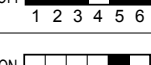

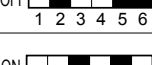

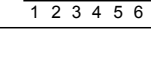

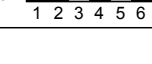

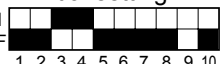

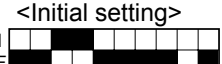

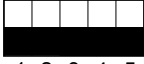

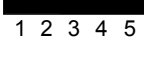

- High voltage is applied to the connector (CNMF) for the fan motor. Pay attention to the service.
- Do not pull out the connector (CNMF) for the motor with the power supply on.
(It causes trouble of the indoor controller circuit board and fan motor.)

② Self check

Symptom : The indoor fan cannot turn around.

7-2. FUNCTION OF DIP SWITCH

Switch	Pole	Function	Operation by switch		Effective timing	Remarks

OPERATING PROCEDURE

PHOTOS & ILLUSTRATIONS

3. Removing the room temperature thermistor (TH21)

- (1) Remove the air intake grille. (See Figure 1,2)
- (2) Remove the screw from the beam and remove the beam. (See Photo 1)
- (3) Remove 2 screws from the electrical cover, and remove the electrical cover.
- (4) Remove 2 screws from the electrical box and pull the electrical box downward. Temporarily secure the electrical box using 2 hooks in the back of electrical box.
- (5) Disconnect the connector CN20 (red) from the indoor controller board.
- (6) Remove the sensor holder from the electrical box and remove the thermistor from the holder.

Photo 4

4. Removing the fan motor and right side fan

- (1) Remove the air intake grille. (See Figure 1,2)
- (2) Remove the screw from the beam and remove the beam. (See Photo 1)
- (3) Remove 2 screws from the electrical cover, and remove the electrical cover.
- (4) Remove 2 screws from the electrical box and pull the electrical box downward.
- (5) Temporarily secure the electrical box using 2 hooks in the back of electrical box.
- (6) Remove the lower casing while pressing the 4 catches of the casing (right side of the fan motor). (See Photo 6)
- (7) Loosen the 2 set screws (2 hexagon set screws) of connecting joint and slide the fan motor to the left. (See Photo 5)
- (8) Remove the screw for motor earth wire. (See Photo 5)
- (9) Remove the motor piece (left and right, each 1 screw). (See Photo 5)
- (10) Remove the fan motor and right side fan together.
- (11) Loosen the set screw (hexagon set screw) of fan and remove the fan from the shaft. (See Photo 7,8)

Photo 8

OPERATING PROCEDURE

5. Removing the fan (3 connection)

- (1) Remove the air intake grille. (See Figure 1,2)
- (2) Remove the screw from the beam and remove the beam. (See Photo 1)
- (3) Remove 2 screws from the electrical cover, and remove the electrical cover.
- (4) Remove 2 screws from the electrical box and pull the electrical box downward. Temporarily secure the electrical box using 2 hooks in the back of electrical box.
- (5) Remove 2 screws from the left side beam and remove the beam. (See Photo 9)
- (6) Loosen 2 set screws (2 hexagon set screws) of connecting joint. (See Photo 5)
- (7) Remove 3 lower casings while pressing each 4 catches of the casing. (See Photo 6)
- (8) Remove the 4 screws from the bearing support. (See Photo 10)
- (9) Slide the connecting joint to the left and remove the fans and shaft together. (See Photo 11)
- (10) Remove the fan from the shaft. (See Photo 7,8)

Photo 11

6. Removing the side panel

- (1) Remove the air intake grille. (See Figure 1,2)
- (2) Remove the screw from the side panel, and remove the side panel by sliding the panel to the front.

7. Removing the vane motor

- (1) Remove the air intake. (See Figure 1,2)
- (2) Remove the right side panel. (See Figure 3)
- (3) Remove the connector of vane motor.
- (4) Remove 2 screws of vane motor cover , then remove vane motor.

Photo 12

8. Removing the under panel

- (1) Remove the air intake grille. (See Figure 1,2)
- (2) Remove the left and right side panels. (See Figure 3)
- (3) Remove the beam. (See Photo 1)
- (4) Remove the electrical cover. (See Photo 1)
- (5) Pull the electrical box downward. (See Photo 2)
- (6) (Wireless remote controller receiver type only)
Disconnect the connector CNB from the PCB for wireless remote controller and remove the clamp and strap for wires.
- (7) Remove 8 screws from the under panel.
- (8) Move the under panel forward by about 7/16in. (10mm) and remove the under panel.

Photo 13

9. Removing the drain pan

- (1) Remove the air intake grille. (See Figure 1,2)
- (2) Remove the side panel (right and left). (See Figure 3)
- (3) Remove the under panel. (See Photo 13)
Remove the screws of the right and left side drain pan. (See Photo 14)
- (4) Remove 2 insulation in centre of the drain pan, and after removing 2 screws with washer, remove the drain pan. (See Photo 15,16)

(Note)

Please be aware that there might be some drainage left in the drain pan when you remove the drain pan.

OPERATING PROCEDURE

PHOTOS & ILLUSTRATIONS

10. Removing the pipe thermistors/Liquid (TH22) and Gas (TH23)

- (1) Remove the air intake grille. (See Figure 1,2)
- (2) Remove the left and right side panels. (See Figure 3)
- (3) Remove the under panel. (See Photo 13)
- (4) Remove the drain pan. (See Photo 14, 15, 16)
- (5) Disconnect the connector CN44 (white) from the indoor controller board.
- (6) Remove 6 screws from the pipe cover and remove the pipe cover. (See Photo 14, 17)
- (7) Remove the fastener for wires and remove the thermistors (liquid and gas) from each holder. (See Photo 18)

Photo 17

Photo 18

11. Removing the guide vane

- (1) Remove the intake grille. (See Figure 1,2)
- (2) Remove the side panel (right and left). (See Figure 3)
- (3) Remove the under panel. (See Photo 13)
- (4) Remove the drain pan. (See Photo 14, 15,16)
- (5) Remove the screw from the guide vane, then remove the guide vane.

Photo 19

12. Removing the Auto vane

- (1) Remove the intake grille. (See Figure 1,2)
- (2) Remove the right side panel. (See Figure 3)
- (3) Remove the vane motor and cover. (See Photo 12)
- (4) Slide the auto vane to the vane motor side.
- (5) Remove 2 axes from each vane support pushing the vane support to the vane sleeve side.

Photo 20

OPERATING PROCEDURE

13. Removing the heat exchanger and LEV

- (1) Remove the air intake grille. (See Figure 1,2)
- (2) Remove the beam. (See Photo 1)
- (3) Remove the electrical cover. (See Photo 1)
- (4) Pull the electrical box downward. (See Photo 2)
- (5) Disconnect the connector CN60 (white) from the indoor controller board.
- (6) Remove the left and right side panels. (See Figure 3)
- (7) Remove the under panel. (See Photo 13)
- (8) Remove the drain pan. (See Photo 14,15,16)
- (9) Remove the pipe cover. (See Photo 17)
- (10) Remove the pipe thermistors (TH22 and TH23) from each holder. (See Photo 18)
- (11) Remove the pipe band fixing screw and remove the pipe band. (See Photo 21)
- (12) Remove 2 screws from the heat exchanger and remove the heat exchanger with LEV.
